

SonoCiné has demonstrated clinical outcomes.

- **Multi-Center Trial** (*European Radiology*, March, 2010).
 - Blinded and Prospective
 - Large study (more than 6,400 exams)
 - Multicenter (8 centers)
 - Compared performance of mammography and SonoCiné as screening modalities in dense-breasted patients.
 - Mammography performed as expected (3.6 cancers discovered per 1,000 patients)
 - SonoCiné found more and smaller cancers than mammography in dense breasted patients in this study.
 - *3.6 additional, or mammographically-occult, cancers per 1,000 patients.*
 - *Median size of mammographically-occult cancers was 9mm.*
 - SonoCiné did not cause excessive biopsies.
 - *PPV of SonoCiné-inspired biopsies was 38%.*
